LAUNCHPAD RESEARCH · NOVEMBER 1, 2026

The 0.0016%: what survives a memecoin launchpad

Of 24,563,926 tokens launched on pump.fun, 390 are alive above $100k today, about 1 in 62,984. This report studies those survivors: who they are, how they got there, who made money trading them, and how other launchpads compare. Snapshot October 31, 2026; every number is computed from on-chain and market data or cited.

---

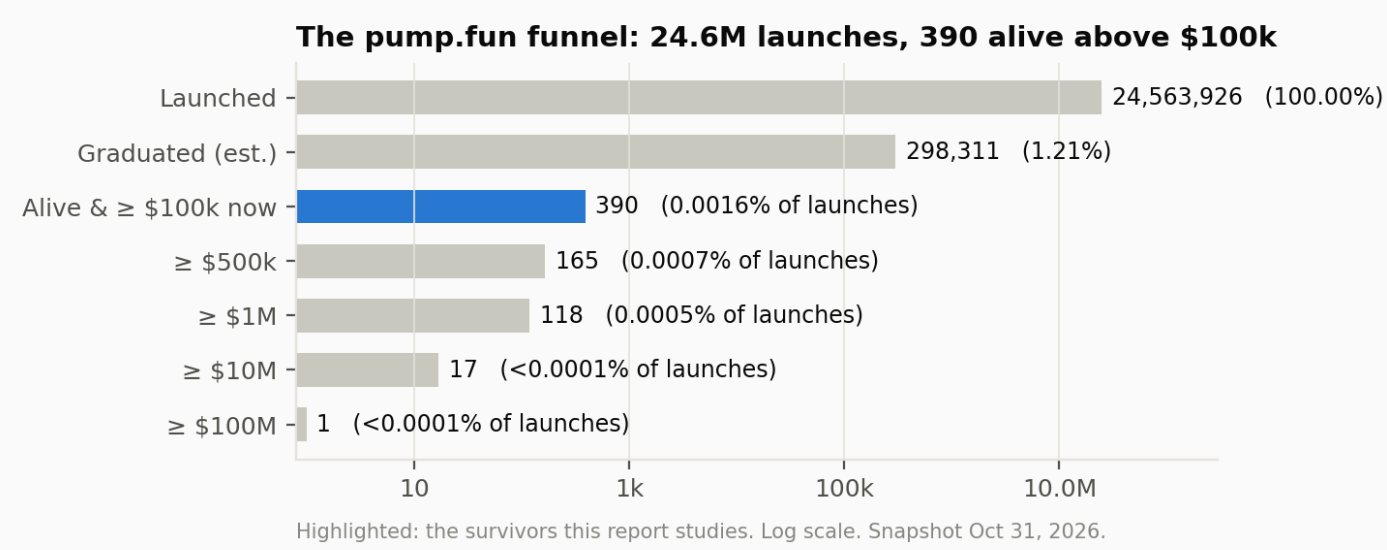

1. Summary

- **390 survivors out of 24.6M launches (0.0016%).** 118 are above $1M, 17 above $10M and one (Fartcoin) above $100M. The median survivor is $402k: most sit just over the line.
- **The typical token never gets going.** Across 19.2M pump.fun tokens Dune can see, the median lifetime volume is $1k and the median token trades on 1 day. Only 1% ever pass $227k of volume.
- **Graduation is about 1 in 116** in a normal stretch (0.86%), recently inflated to 2.95% by July's BOOST incentive change, much of it self-funded.
- **Once past $100k, survivors stay there.** The median survivor closed at $100k or more on 99% of its days since graduating; 280 of 389 did on at least 90% of them.
- **Two kinds of survivor.** 187 of 389 have traded for over a year (median age 348 days), while 43 are under 30 days old and have not yet faced the test of time.
- **Even in the winners, 59% of trading positions are under water** (realized + unrealized). The top 1% of positions hold 82% of all profit.
- **Creator rewards are real but thin.** $649.38M has accrued to pump.fun creators since May 2025, but the median token earned $0.55. The 368 survivors with measurable fees took 3.8% of it; their median creator earned $18k.
- **Pons, for comparison.** On Robinhood Chain, 98 of ~646k Pons launches are above $100k (0.015%, about 1 in 6,592), a rate roughly 10× pump.fun's, from a far younger and smaller base.

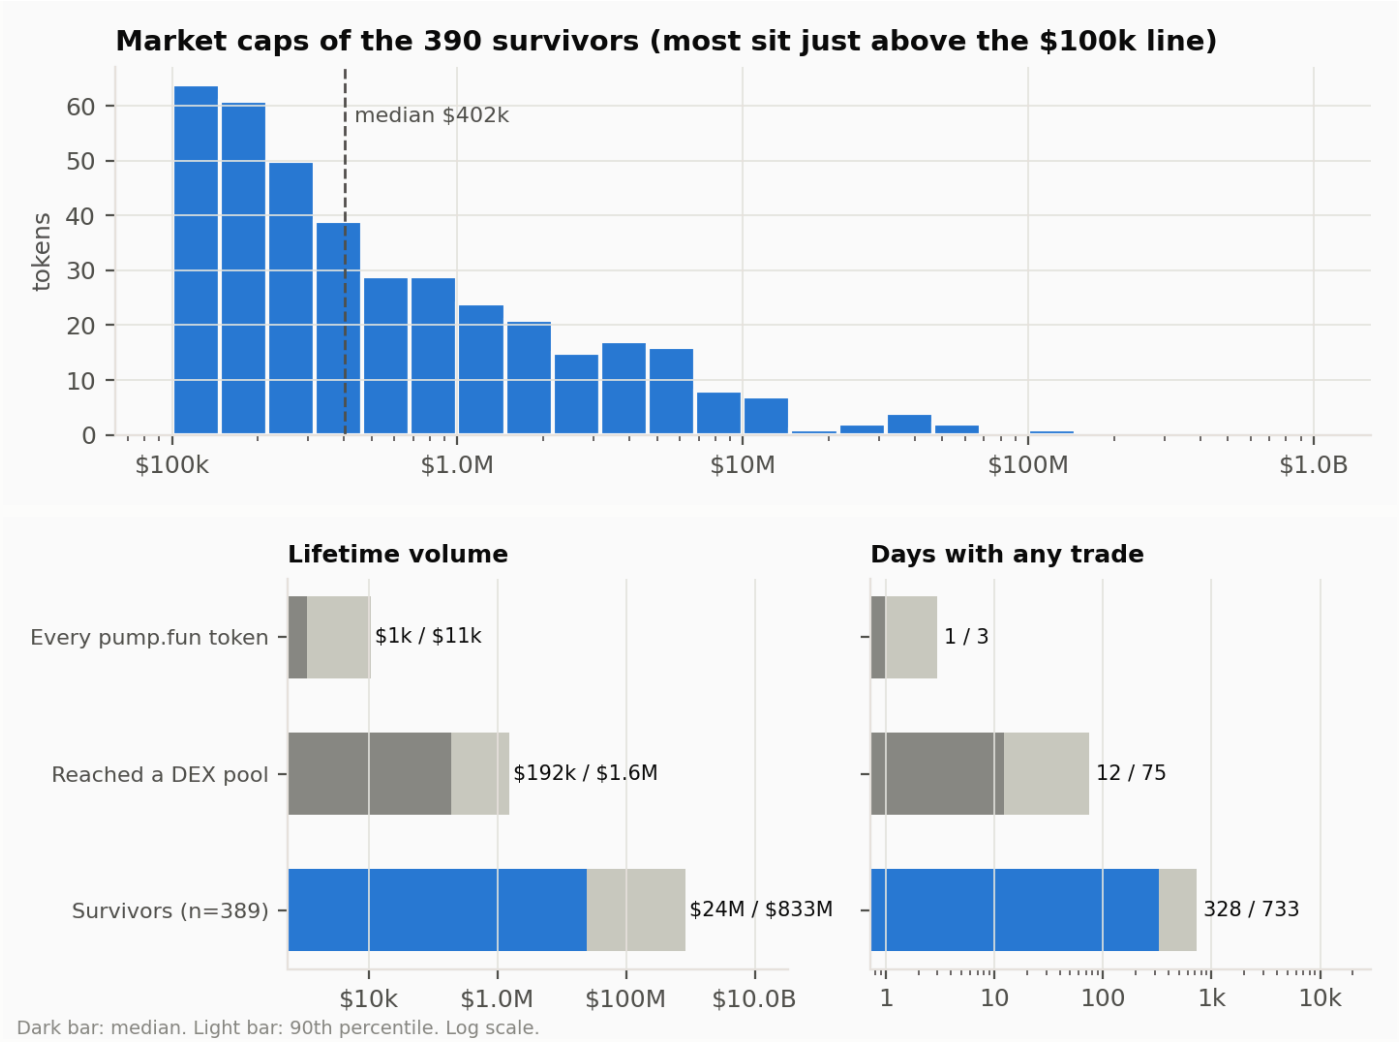

2. Fact-check: "24.4M coins yield just 312 over $100K"

Claim	What the data says	Verdict
24.4M coins launched	Dune: 24,563,926 tokens from pump.fun (October 31, 2026)	✅ Correct
312 above $100k	390 pump-suffix mints priced ≥$100k with ≥$5k liquidity and liquidity ≥1.5% of mcap (DexScreener). CoinGecko's Pump.fun category lists 441 ≥$100k including early tokens without the suffix. Excluded: 13 pump-suffix "fund/stock" tokens quoted at $61M–$2.9B on pools holding 0.15–1% of that, and 3 small tokens with under 50 holders or lifetime volume under 5% of market cap.	⚠️ Low by ~25–40%. Directionally right.
<0.0013% success	0.0016% (pump-suffix) to ~0.0018% (all pump.fun)	⚠️ Slightly higher, same order
99.998% "hit zero"	Below $100k is not the same as zero. CoinGecko: 68.7% of tokens last traded on launch day; 4.55% traded past 90 days.	⚠️ Overstated framing
PEPE and WIF as pump.fun wins	PEPE (Ethereum, Apr 2023) and WIF (Solana via Raydium, Nov 2023) predate pump.fun (Jan 2024). Real pump.fun hits: Fartcoin, GOAT, PNUT, MOODENG.	❌ Wrong

3. The funnel

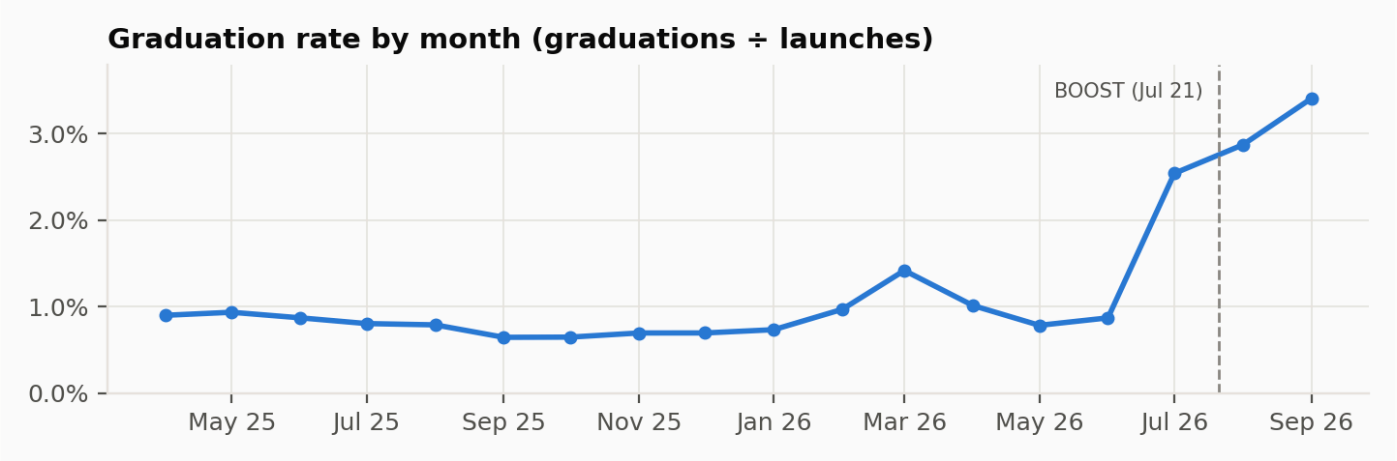

Graduated (est.) = Dune PumpSwap-era graduations (186,311, Apr 2025 – Sep 2026) + an October estimate + ~85k estimated earlier Raydium migrations. Tiers above $100k count tokens alive now, not tokens that ever touched those levels.

Metric	Every token (n=19,237,574) median · 99th · 99.9th pct	Reached a DEX pool (n=390,082) median · 99th pct	Survivors (n=389) median · 10th pct
Lifetime volume	$1k · $227k · $3.05M	$192k · $13.98M	$24.37M · $1.25M
Days with at least one trade	1 · 26 · 114	12 · 291	328 · 27
Days with $10k+ volume	0 · 1 · 6	1 · 28	139 · 8
Days with $100k+ volume	0 · 1 · 2	1 · 8	33 · 1

Every-token and graduated columns: Dune trades since 2024-05-30 on pump.fun's curve, PumpSwap and Raydium, where almost all pump.fun tokens trade. Survivors: the 389 survivors with Dune history on every Solana venue (larger survivors also trade on Meteora, Orca and others, so their volume is higher than a three-venue count). Market-cap-based all-token statistics are left out: single-trade prices on Dune contain extreme outliers.

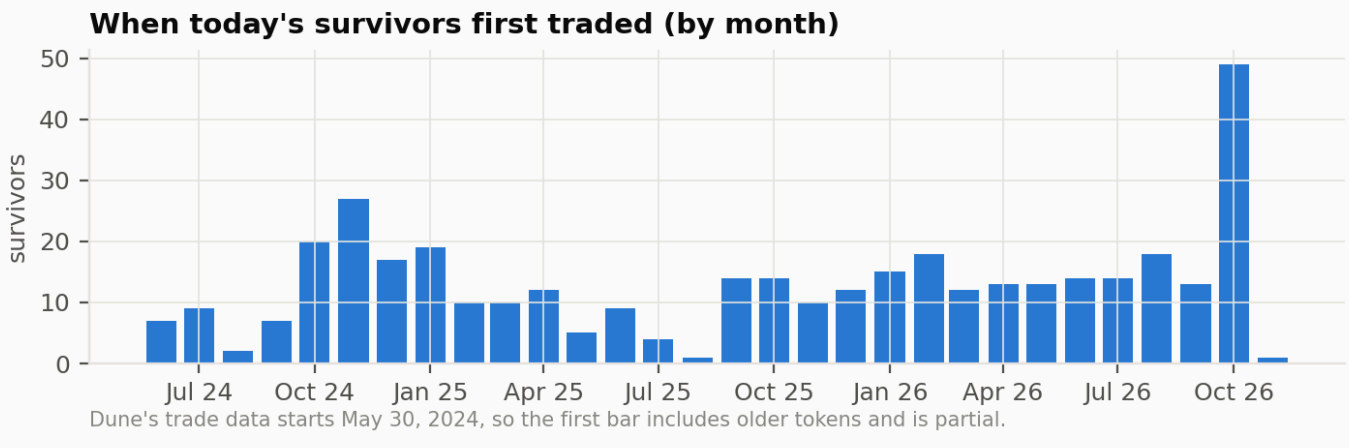

4. Graduation

Month	Launches	Graduations	Rate	Odds
2025-10	451,942	2,920	0.65%	1 in 155
2025-11	514,323	3,568	0.69%	1 in 144
2025-12	624,638	4,336	0.69%	1 in 144
2026-01	884,249	6,472	0.73%	1 in 137
2026-02	865,014	8,372	0.97%	1 in 103
2026-03	805,511	11,411	1.42%	1 in 71
2026-04	811,326	8,205	1.01%	1 in 99
2026-05	896,034	7,010	0.78%	1 in 128
2026-06	854,035	7,417	0.87%	1 in 115
2026-07	869,037	22,073	2.54%	1 in 39
2026-08	1,191,797	34,214	2.87%	1 in 35
2026-09	1,001,050	34,113	3.41%	1 in 29

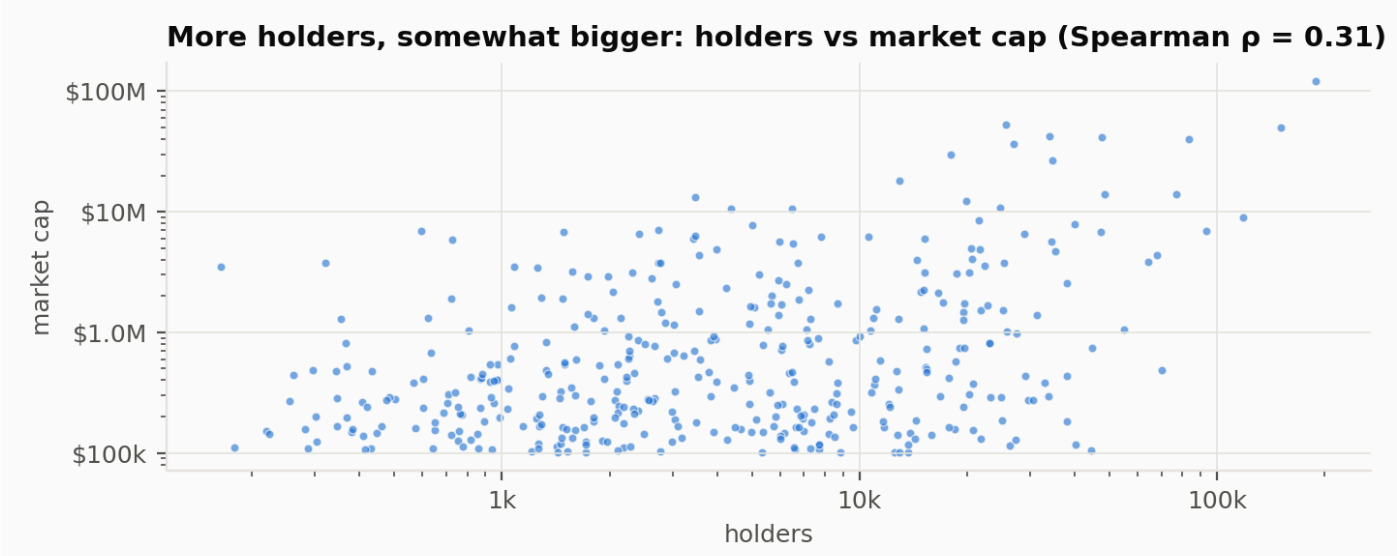

- **PumpSwap era overall:** 1.32%
- **Normal stretch (Jul 2025 – Jun 2026):** 0.86%, about 1 in 116
- **After BOOST (Jul – Sep 2026):** 2.95%
- **What BOOST changed (Jul 21, 2026):** the ~20% of migration liquidity that used to be locked is now spent on market buys in the first five minutes after graduation, and those tokens are burned.
- Bitquery: graduations bought out in three trades or fewer rose from 2% (Nov 2025) to 33% (Sep 2026). Many recent "graduations" are self-funded.

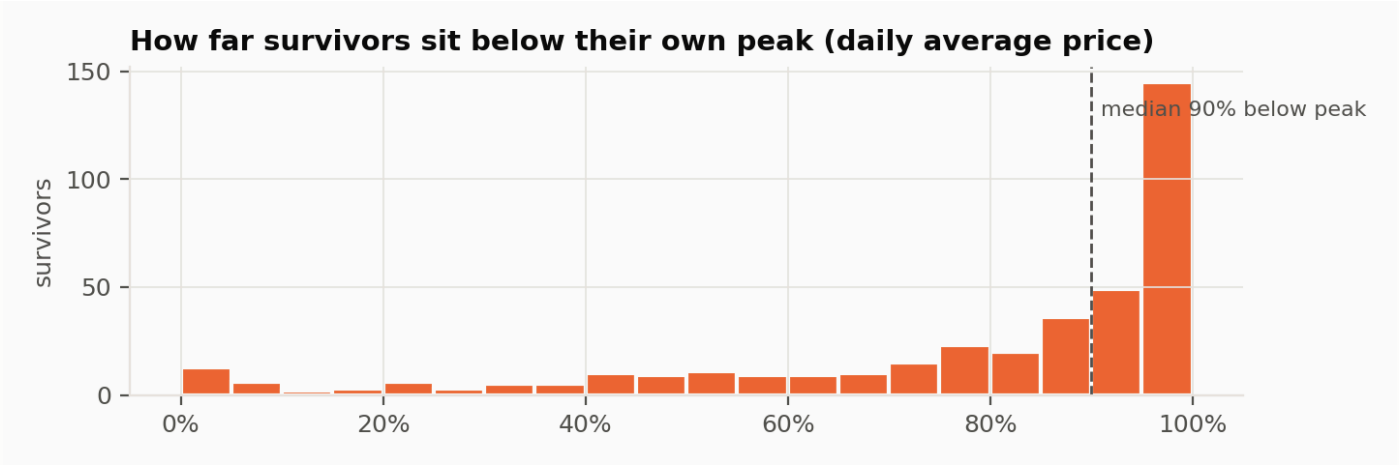

5. Who the survivors are

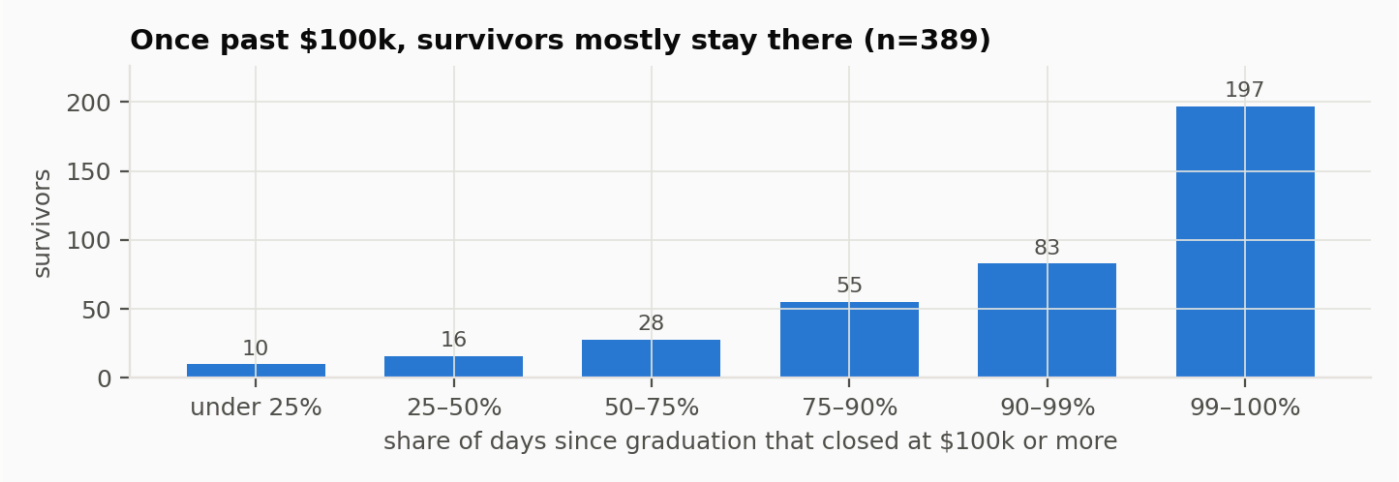

Survivor metric	10th pct	25th	Median	75th	90th
Market cap now	$125k	$180k	**$399k**	$1.38M	$4.86M
Holders	639	1,452	**3,842**	12,106	25,110
Top-10 wallets' share of supply	24%	30%	**41%**	54%	74%
Pool liquidity	$39k	$53k	**$93k**	$178k	$328k
24h volume	$41	$341	**$3k**	$21k	$144k
Market cap per holder	$16	$44	**$152**	$415	$1k
Creator fees accrued	$0	$0	**$18k**	$85k	$231k
Age (days since first trade)	27	124	**348**	651	737
Lifetime volume	$1.25M	$5.03M	**$24.37M**	$185.72M	$832.82M
Days with $10k+ volume	8	36	**139**	310	518
Days closed above graduation cap	22	124	**311**	642	723
Peak market cap (daily average price)	$583k	$1.55M	**$6.63M**	$29.01M	$129.12M

- **Holders and size:** median 3,842 holders and $152 of market cap per holder. More holders goes with a bigger market cap, but loosely (Spearman ρ = 0.31).
- **Concentration:** the median survivor's top 10 wallets hold 41% of supply (this count includes pool and locker accounts).
- **Below the peak:** the median survivor trades 90% below its own peak daily price.

Staying above $100k

- **The median survivor closed at $100k or more on 287 days, 99% of its days since graduation** (median 336 days since graduating). A quarter are at 88% or less.
- **Whole days, not just closes:** counting only days when even the day's low held $100k, the median is still 98%. 280 of 389 survivors closed at $100k or more on at least 90% of their post-graduation days; 26 spent most of them below.
- **How to read it:** survivors don't hover around $100k. Once past it, they mostly stay. These are tokens alive today, so this says nothing about the tokens that crossed $100k and later died.
- **How it is measured:** daily open, high, low and close market cap for each survivor from every Dune trade of $10 or more across all venues, × 1B supply. Daily high and low use the 99th/1st percentile trade price, so one mispriced swap can't set the range. A day with no trades counts as below. On the 82,948 days both sources cover, Dune and GeckoTerminal agree 99.9% on whether the close was ≥$100k.

The 20 largest survivors

Token	Mcap now	Peak mcap	Lifetime vol	Holders	First trade	Creator fees*
Fartcoin	$121.20M	$2.13B	$47.58B	189,329	2024-10	$0
Ban	$53.14M	$308.89M	$1.53B	25,698	2024-10	$0
ANSEM	$50.05M	$381.36M	$1.85B	151,259	2026-06	$287k
jellyjelly	$42.44M	$283.33M	$3.56B	33,931	2025-01	$0
arc	$41.16M	$577.24M	$7.23B	47,668	2024-12	$0
Pnut	$40.03M	$2.00B	$5.70B	83,455	2024-10	$0
ALCH	$36.68M	$235.12M	$2.63B	27,061	2024-11	$0
DESSA	$29.65M	$29.65M	$13.67M	17,954	2026-10	$23k
neet	$26.85M	$48.65M	$733.82M	34,631	2025-04	$265k
FARTBOY	$18.01M	$173.42M	$332.97M	12,952	2025-01	$0
pippin	$13.96M	$834.41M	$5.28B	48,635	2024-11	$0
GOAT	$13.88M	$1.29B	$8.37B	76,921	2024-10	$0
MarsMi	$13.18M	$181.95M	$58.53M	3,465	2025-07	$29k
BTC	$12.16M	$12.52M	$22.78M	19,924	2026-09	–
Bert	$10.77M	$141.03M	$888.74M	24,814	2024-09	$0
WOULD	$10.58M	$679.53M	$345.95M	6,477	2024-07	$0
GOLD	$10.55M	$13.27M	$1.94M	4,379	2026-06	$7k
CHILLGUY	$8.99M	$600.80M	$5.58B	118,439	2024-10	$0
Dacity	$8.42M	$12.79M	$21.79M	21,617	2026-10	–
ACT	$7.86M	$800.90M	$2.40B	39,873	2024-10	$0

*Creator fees accrued on pump.fun since fees began (May 13, 2025). Tokens that graduated to Raydium before then, like most 2024 hits here, earn their creators nothing from pump.fun, however much they trade. Peak = highest daily volume-weighted price × 1B supply. Volume counts every Solana venue.

6. Who made money trading the survivors

Read this as survivorship bias, on purpose. These are trades in 389 of the 390 tokens still alive above $100k (one has no trade history on Dune): about 0.0016% of everything launched. Trades in the other 99.998% were not measured; most of those tokens are worth close to nothing. So the question is not "do memecoin traders make money" but **"even in the winners, who made money?"**

WALLET-TOKEN POSITIONS

30,623,978

14,149,980 pass the transfer check (46%) · 6,422,591 wallets

41%

of checked positions · median −$0.07

IN PROFIT ON WHAT THEY SOLD

45%

of checked positions that sold · median realized −$0.01

REALIZED GAINS / LOSSES

$3.86B

vs −$2.17B realized losses

UNREALIZED, AT OCT 31 SNAPSHOT PRICES

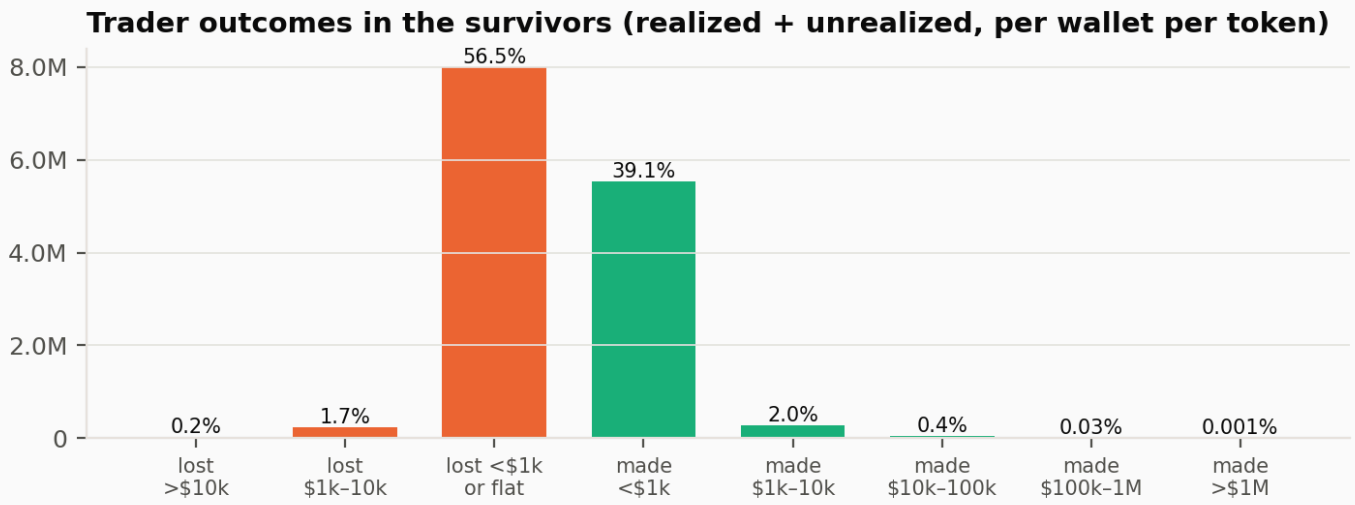

−$275.84M

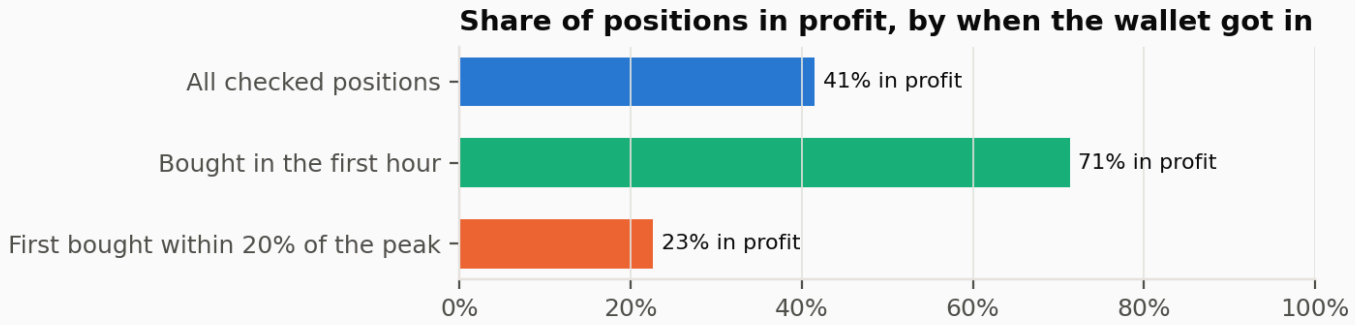

on $133.57M still held · paper, not cash

TOP 1% OF POSITIONS

82%

of all profit · top 10%: 99%

- **Typical size:** the median checked position bought $50 in total. P&L 10th / 90th / 99th percentile: −$76 / $69 / $3k.
- **Early vs late.** 519,825 positions were opened in a token's first hour of trading; 71% are in profit (median $11). 1,826,124 first bought within 20% of the token's peak daily price; 23% are in profit (median −$4).
- **Paper vs cash.** 48,459 checked positions are "in profit" only on unrealized gains, and 1,795,426 still hold tokens. Unrealized value assumes the tokens could be sold at Oct 31 snapshot prices; for large holders the pool cannot absorb that, so realized P&L is the harder number.
- **Excluded from the headline:** 16,473,998 positions (54%). 14,183,937 hold a balance that does not match their swaps, meaning tokens moved by plain transfer (1,643,798 hold more than they swapped in, e.g. received from another wallet; the rest hold less, e.g. sent elsewhere). 2,290,061 only ever sold. Their P&L can't be measured without knowing who owns the other wallet.

7. Creator rewards

CREATOR FEES, ALL TOKENS

$649.38M

MEDIAN TOKEN EARNED

$0.55

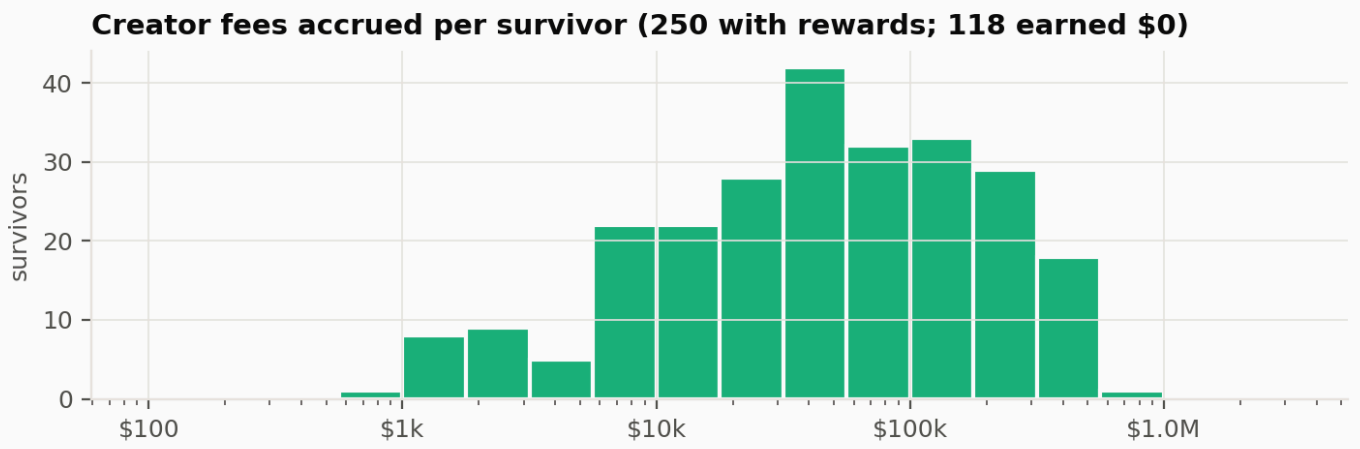

SURVIVORS' SHARE

3.8%

May 13, 2025 – Nov 1, 2026 · 13.7M tokens

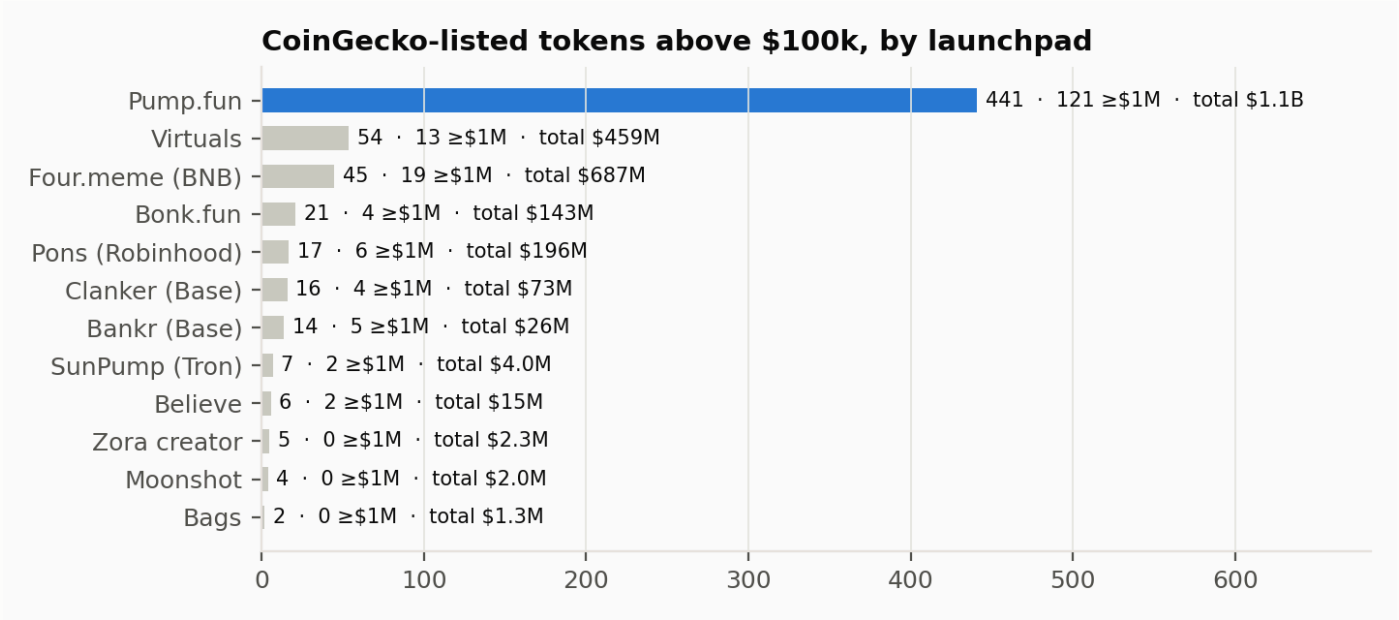

99th pct $349 · 99.9th $8k

of all creator fees, from 0.0016% of tokens

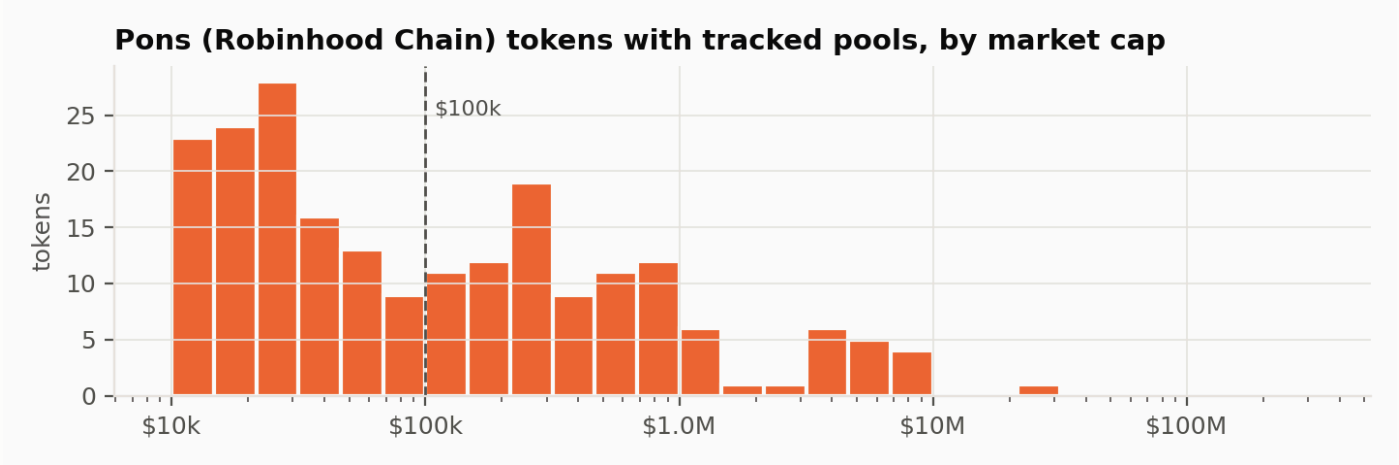

- **The whole platform:** $649.38M in creator fees accrued from May 13, 2025 (when creator fees began) to Nov 1, 2026, across 13.7M tokens: $545.68M on PumpSwap and $103.70M on the bonding curve. The median token earned its creator $0.55; the 99th percentile $349. 461 tokens earned over $100k; none over $1M (largest $628k).
- **Survivors:** the 368 survivors with measurable fees accrued $24.93M, 3.8% of all creator fees, from about 0.0016% of tokens. Median $18k, 90th percentile $231k; 81 earned over $100k. 118 earned nothing: all first traded before creator fees began (May 13, 2025). Another 21 launched later but trade against USDC or other tokens, whose creator fees are not measured here; they are left out of the fee figures.
- **How it is measured:** fees accrued per token in Dune's decoded pump.fun events: bonding-curve trades quoted in SOL and PumpSwap pools quoted in WSOL, priced at the daily SOL price. It counts fees whoever received them (the original creator, a later creator address, or fee-sharing recipients). Dune's older event format (bonding curve, before about Nov 2025) has no fee fields, so $30.49M (5% of the total) is estimated from volume at pump.fun's published curve rate. Curves quoted in other tokens (2.7% of bonding-curve trades) are left out. Cross-check: DefiLlama puts PumpSwap's fees to LPs and creators at $798M over the same period, of which our $545.68M creator share is a plausible part, and its bonding-curve figure ($126M) is close to ours ($103.70M).

8. Pump.fun vs other launchpads

Launchpad	CoinGecko listings*	≥$100k	≥$1M	≥$10M	Total mcap	Largest
Pump.fun (Solana)	**1500**	**441**	**121**	**22**	**$1.08B**	**FARTCOIN $120.21M**
Four.meme (BNB)	179	45	19	8	$686.89M	币安人生 $533.22M
Virtuals (Base/Solana)	280	54	13	3	$458.69M	VIRTUAL $392.28M
Pons (Robinhood Chain)	67	17	6	1	$196.30M	PONS $159.64M
Bonk.fun (Solana)	129	21	4	1	$143.23M	USELESS $130.87M
Clanker (Base)	87	16	4	4	$73.02M	BNKR $28.80M
Bankr (Base)	29	14	5	1	$25.75M	SURPLUS $17.05M
Believe (Solana)	42	6	2	1	$15.43M	KLED $11.67M
SunPump (Tron)	17	7	2	0	$4.01M	SUNDOG $1.18M
Zora creator coins (Base)	22	5	0	0	$2.28M	KAZONOMICS $913k
Moonshot (Solana)	30	4	0	0	$2.01M	MEMDEX $803k
Bags (Solana)	60	2	0	0	$1.27M	ASTEROID $208k

Pons (Robinhood Chain)

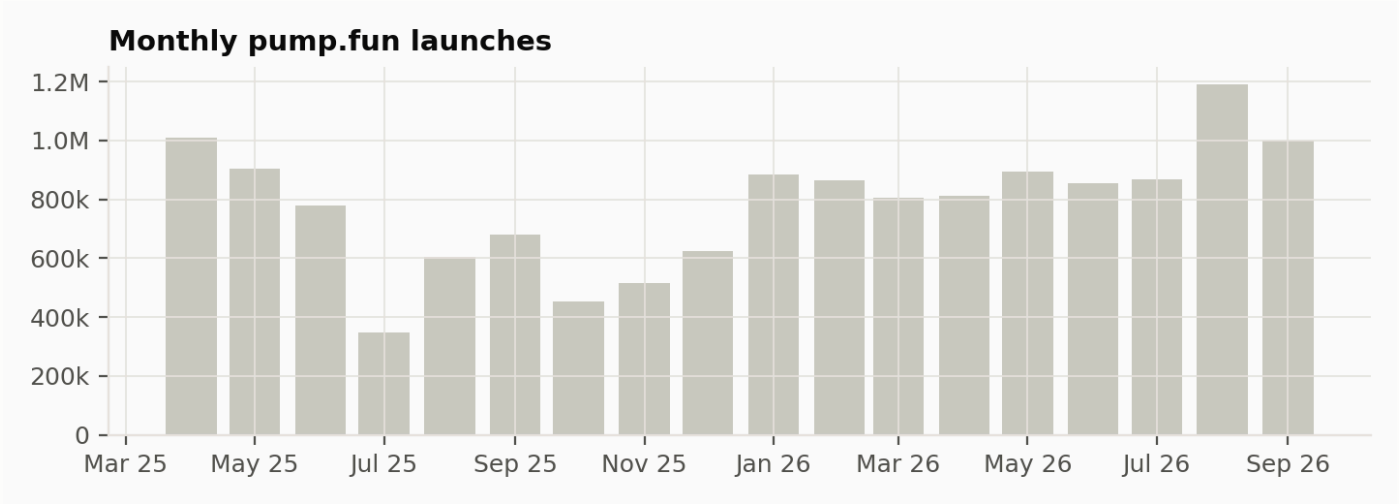

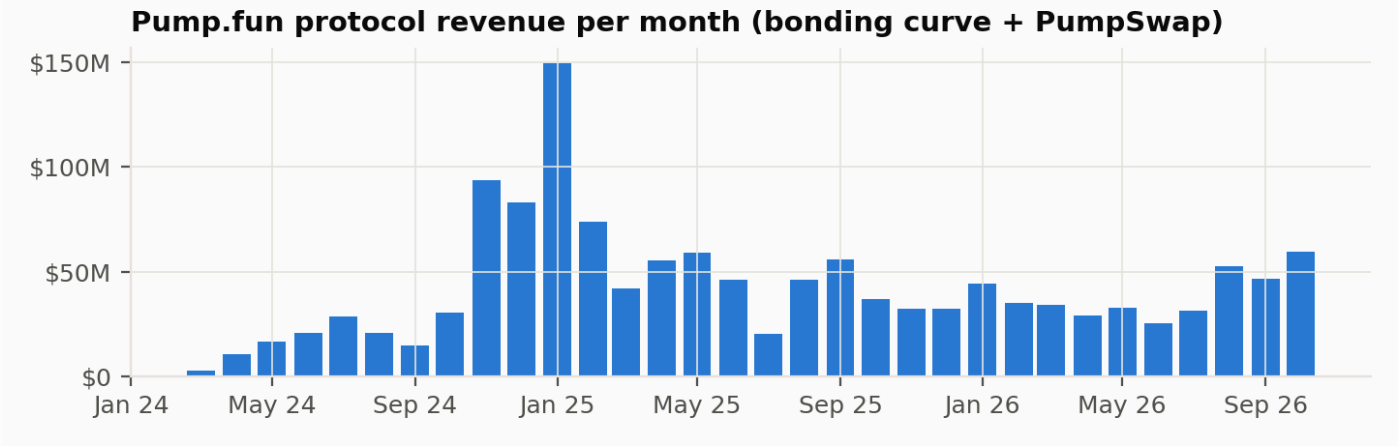

- **98 Pons tokens above $100k**, 24 above $1M and 1 above $10M, among 262 with tracked pools (GeckoTerminal). Against ~646k launches by Sep 3, 2026, that is 0.015%: about 10× pump.fun's survival rate. The launch count is from Sep 3, so the true rate is somewhat lower.
- **Why the gap:** Pons is months old, so its tokens have not had time to die; it launched with a burst of attention (out-earning pump.fun in daily fees on Sep 2, 2026: $5.95M vs $4.64M); and memescope measured 3.0% of Pons launches bundled at launch vs 24.1% on pump.fun. Fees later fell ~80%.

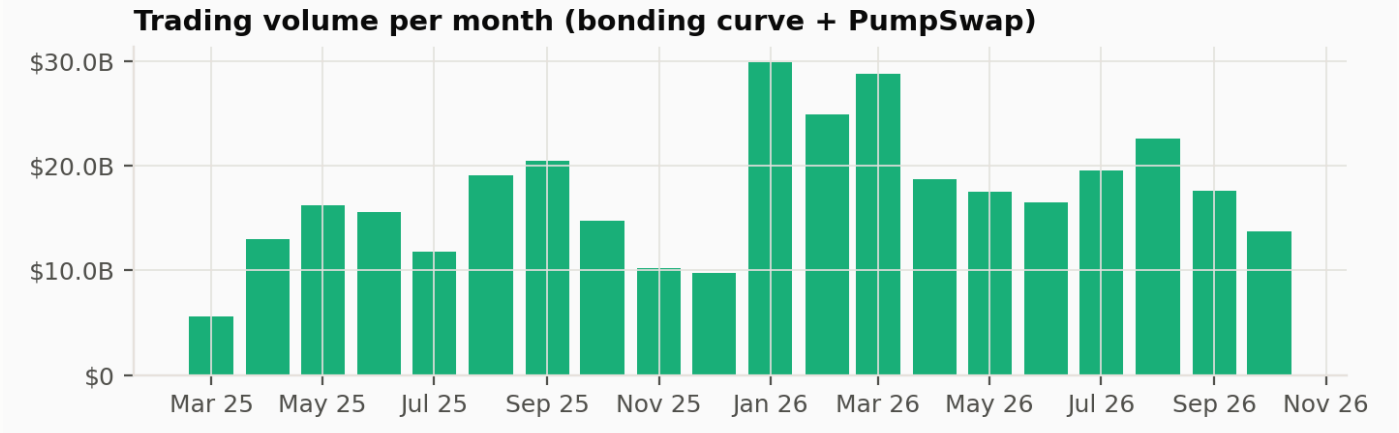

Launchpad	Tokens launched	Graduation	Notes
Pump.fun	**24.56M**	**~0.9% normal / ~3% now**	**~78% of new Solana tokens; ~$1.5B lifetime revenue**
Pons (Robinhood Chain)	~646k by Sep 3, 2026	n/a	~25k/day at peak
Four.meme (BNB)	~384k (Oct 2025)	~1.34%	Out-earned pump.fun on daily revenue in Oct 2025
Bonk.fun (Solana)	n/a	~0.95% (Jul 7, 2025)	Flipped pump.fun in daily launches Jul 6, 2025; lost the lead by August
Meteora DBC (Solana)	~10% of Solana launches	~75%	Mostly project launches, not memecoins
Clanker (Base)	~13k/day (Feb 2026)	n/a	Record $8.0M fee week, early Feb 2026

*Coins in each CoinGecko launchpad category; for pump.fun this is the top 1,500 by market cap (the category is larger). CoinGecko listings undercount every launchpad (for Pons, GeckoTerminal shows 98 tokens above $100k where CoinGecko lists 17), so the CoinGecko table compares like with like, not a census.

9. Platform trends

- **Revenue:** ~$1.55B lifetime (Dune). DefiLlama: $321M in 2024 and $649M in 2025.
- **Daily launches:** peaked at 71,735 (Jan 23, 2025); September 2026 averaged ~33k a day, with 36–52k a day in late October.
- **Market share:** pump.fun created 78% of new Solana tokens (Nov 2025 – Oct 2026, peaking at 90% in Aug 2026). LetsBonk briefly flipped it in Jul 2025.
- **PUMP buybacks:** ~$350–400M cumulative; 50% of net revenue now funds buyback-and-burn.

10. The dark side, and the other side

Metric	Finding	Source / date
Rugs and pump-and-dumps	98.6% of 7M+ tokens; only 97k kept ≥$1k liquidity (pump.fun disputes)	Solidus Labs, May 2025
Launch-day death	68.7% last traded on launch day; 80.4% within a day	CoinGecko, Jun 2026
Bundled at launch	24.1% of pump.fun launches bundled in the first block (Pons: 3.0%)	memescope, Oct 2026 (n=1,161)
Coordinated supply	36.5% of supply held by coordinated accounts on average	arXiv 2602.13480, 2026
Snipers	Over 50% of tokens sniped in the creation block; 87% of snipes profitable	Pine Analytics, Apr 2025
Wash trading	≥17% of trades; present in 8.3% of coins	arXiv 2609.10246, 2026
Curve-skip rugs	451k coins skipped the curve; 99% of their pools were emptied, median 12 minutes	Bitquery, Jul 2026
Fake valuations	13 pump-suffix "fund/stock" tokens in our scan were quoted at $61M–$2.9B on pools holding 0.15–1% of that	This report

> **The other side.** Bundling is not automatically malicious: a visible, disclosed dev buy at launch is the on-chain version of a team allocation, and Bubblemaps treats bundled supply under 5% as low concern. What hurts buyers is hidden concentration. Trader outcomes also improved in 2026: CoinGecko's profitable-wallet share rose from 30% (Jun 2025) to 73% (Apr 2026).

11. The survivors up close: socials, devs, buyers and narratives

For each of the 389 survivors we pulled its listed socials and links, its X account, every trade and the dev's own trades on-chain, and a reading of its own website and X bio. Collected 2026-11-05; each row names its source.

Web presence and socials

Fact	Survivors	Source
Lists an X account	352 (90%)	DexScreener
Website	351 (90%)	DexScreener
Telegram	256 (66%)	DexScreener
Discord	62 (16%)	DexScreener
Links to docs, a whitepaper or tokenomics	54 (14%)	DexScreener
Links to GitHub	14 (4%)	DexScreener
Also on another chain	14 (4%): base 5, robinhood 4, ethereum 4, peaq 2	CoinGecko
Paired with something other than SOL	19 (5%)	DexScreener
Main pool on Raydium (graduated before PumpSwap, Mar 2025)	116 (30%)	DexScreener

X accounts

Fact	Survivors	Source
Listed account exists	336 of 352 handles (11 suspended)	X API v2
Posted in the last 30 days	279 (72%)	X API v2
Account older than the token's first trade	273 (81%) of accounts found	X API v2 · Dune
Followers	median 3,004; 259 over 1k, 80 over 10k, 10 over 100k	X API v2
Ansem (@blknoiz06) posted about it, naming its mint or X account	16 tokens: ANSEM (61), KINS (15), SOLANGELES (6), CLAW (5), MOBY (3), MANIFEST (3), TBB (2), Fartcoin (1), Cupsey (1), LMAO! (1), CHILLHOUSE (1), Clude (1), WIZARD (1), KET (1), KNIGHT (1), Jimothy (1); 1 more by $ticker only, not counted	X API v2

Devs and creator rewards

Fact	Survivors	Source
Dev (create signer) on record	388 (100%)	Dune
Dev bought at launch (within 60s)	363 (93%); median 1.50 SOL, 5.1% of supply	Dune
Dev still holds some	198 (51%); 80 hold over 1% of supply	Dune
Creator rewards now go to another wallet	39 (10%)	Dune
Creator rewards go to no one (creator set to the system program)	92 (24%)	Dune
pump.fun fee sharing set up	116 (30%)	Dune

Buyers

Median across survivors	All trades	Source
Median buy	0.136 SOL ($14.50)	Dune
Median hold (first buy to last sell)	15.2 h	Dune
Unique buyers	21,412	Dune
Buyers who also bought another survivor	79%	Dune
Buys	176,014; 17% over 1 SOL	Dune
Buys over 100 SOL	median 7; any in 286 survivors	Dune

All trades include bots and MEV, which dominate counts and medians (one survivor's median buy is $0.01, held 16 seconds). The $10+ column applies the rule the Dune price candles use, and is the better read of what people did. SOL size is what the buy paid in SOL, or its USD at that day's SOL price.

Burn mechanism described	28 (7%)	Claude
Dev publicly named (doxxed)	9 (2%)	Claude
Dev's main other project named	77 (20%)	Claude

Read from each token's own materials, which its promoters wrote; a claim there is reported, not verified. Confidence: high 109, medium 202, low 78. Each answer carries the quotes it rests on, in the database.

Hackathons

38 survivors entered Pump.fun Build in Public (BiP) Hackathon 2026 (Pump Fund, $3M); 8 of them won. The winners, with the posts that show it:

Token	Result	Evidence
AgenC	Winner #12 of 12	1 · 2 · 3 · 4 · 5
CLAW	Winner #5 of 12	1 · 2 · 3 · 4
CODEC	Winner #6 of 12	1 · 2 · 3 · 4 · 5 · 6 · 7 · video
Clude	Winner #8 of 12	1 · 2 · 3
DEXTER	Winner #7 of 12	1 · 2 · 3 · 4 · 5 · 6 · video
OPAL	Winner #2 of 12	1 · 2 · 3 · 4 · 5 · 6 · video
ZAUTH	Winner #1 of 12	1 · 2 · 3 · 4 · 5 · 6 · video
dreams	Winner #11 of 12	1 · 2

Other entrants among the survivors: $NRG, $SITCOM, ACE, AKA, ALPHA, AQC, BINDER, BREW, ChiefPussy, Cupsey, DOGGY, Fapcoin, GBACK, KOBX, LIL, MASK, MAXIS, MOBY, PFP, PMV, RAIN, RIVERBOAT, SSR, Tokabu, USDUC, WAGMI, XONA, attn, https. Matched to Proof of Potato projects and to winner and submission posts on X, by mint or X account; each token's evidence links are in the database.

token's own website text, X bio and DexScreener links into a fixed schema, with quoted evidence) · Proof of Potato (pump.fun hackathon project list, plus winner and submission posts on X).

---

12. Methodology and sources

- **Survivors:** mints ending in "pump" priced ≥$100k on DexScreener with ≥$5k liquidity and liquidity ≥1.5% of market cap, from the top 1,500 coins by market cap in CoinGecko's Pump.fun category plus the top 400 PumpSwap/pump.fun pools on GeckoTerminal by volume and by trade count. Also required: at least 50 holders and lifetime volume of at least 5% of market cap, which removes 3 fake-valuation tokens. Early pump.fun tokens without the suffix (MOODENG, ZEREBRO, GRIFFAIN…) are excluded; CoinGecko's category counts 441 above $100k when they are included.
- **Survivor history:** Dune `dex_solana.trades` across every Solana DEX venue (pump.fun's curve, PumpSwap, Raydium, Meteora, Orca and others). Volume counts each swap leg, including aggregator hops and arbitrage bots, so it is higher than single-pool figures; it is measured the same way for every token. Daily market cap = daily volume-weighted price × 1B supply; peak = the highest of those, or today's market cap if higher. Current market cap, liquidity and 24h volume come from the DexScreener snapshot; holders and top-10 share from GeckoTerminal. GeckoTerminal serves only about a year of daily candles, so it was not used for age or lifetime volume.
- **Trader P&L:** per wallet and token, from every swap in Dune's trade table, using the position's lifetime average buy cost (not a running average, so the split between realized and unrealized is approximate; the total is not affected). Realized = sell proceeds − tokens sold × average buy cost; unrealized = tokens held now × (Oct 31 snapshot price − average buy cost), with holdings read from Dune's latest on-chain balances. **Transfer check:** a wallet that only swapped holds exactly what it bought minus what it sold. Positions whose real balance differs from that by more than 5% of what they swapped moved tokens by plain transfer and are left out of the headline, as are wallets that never bought by swap. Swap fees and Solana network fees are not deducted. One person running many wallets counts as many wallets; one wallet holding for many people (a bot or exchange) counts as one.
- **Creator rewards:** Dune decoded pump.fun events (`pumpdotfun_solana.pump_evt_tradeevent` creator_fee; `pump_amm_evt_buyevent/sellevent` coin_creator_fee, pools mapped to tokens via `pump_amm_evt_createpoolevent`), SOL-quoted only, priced at the daily SOL average. Accrued, not claimed. Bonding-curve trades before about Nov 2025 are estimated from volume (see below). Cross-check against on-chain creator-vault inflows (Helius) for the 168 survivors with a measurable vault: 61 match within 20%, many to the SOL; 106 are higher on Dune because fees went to fee-sharing or later creator addresses the original vault never saw; 1 lower.
- **Dune is missing pump.fun's first months.** Dune's trade table starts on 2024-05-30, but pump.fun launched in January 2024. It shows about 19.4M pump.fun mints trading on pump.fun's curve, PumpSwap or Raydium (19.2M with a USD-priced trade) against 24.6M launched, so about 5M are absent: tokens from before May 30, 2024, and tokens that never had a priced trade. It shows 156,828 pump.fun tokens trading on Raydium and 236,298 on PumpSwap (from 2025-03-14). The "reached a DEX pool" group means any token that traded on PumpSwap or Raydium, which includes tokens that created their own pool without graduating, so it is larger than the graduation count. Every all-token statistic means "tokens that traded on or after 2024-05-30".
- **Creator fees and Dune's older event format:** Dune decodes pump.fun bonding-curve trades before about November 2025 in an older format with no fee fields. For those trades, creator fees are estimated from SOL volume at pump.fun's published curve creator rate (0.05% until Sep 2, 2025; 0.30% after, which matches the decoded fees once they appear). PumpSwap creator fees are decoded throughout.
- **Platform series:** Dune dashboard adam_tehc/pumpfun (launches, graduations, revenue); DefiLlama (revenue, volume).
- **Pons:** tokens with pools tracked on GeckoTerminal, with the same thresholds as pump.fun (≥$5k liquidity and liquidity ≥1.5% of market cap), though the pump.fun list is built from CoinGecko and GeckoTerminal top lists. The launch count (~646k) is from Sep 3, 2026 (CoinDesk); launches since then would lower Pons's rate, so the comparison is an upper bound.
- **Survivorship:** the survivor sections describe tokens alive now. Millions of dead tokens that once reached these levels are not in them.
